

SABIN PANT

Software Developer · System Design First · Full-Stack & Backend Architecture

sabinpant100@gmail.com · +977 9845943810 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Most developers jump straight to code. I spend weeks before touching a keyboard defining actors and their flows, designing the database schema with proper indexing, identifying edge cases, race conditions, concurrency issues, and data integrity failures, and deciding how to solve them upfront rather than discovering them in production. BSc Computing student at Islington College (affiliated with London Metropolitan University) with hands-on internship experience, five AWS certifications, and practical expertise in full-stack development using Node.js, NestJS, and PostgreSQL with Prisma/TypeORM. Strong foundational knowledge in Core Java including JSP, Servlets, DAO, and Filter classes.

WORK EXPERIENCE

Full-Stack Developer Intern · Leaflet Digital Solutions, Kathmandu March 2026 – Present

- Building data-intensive systems with Node.js, Express, Next.js and PostgreSQL, responsible for both architecture decisions and implementation.
- Designing and securing API pipelines with JWT authentication and role-based access control across multi-tenant applications.
- Producing API documentation with Swagger, enabling clean handoffs and reducing integration time for frontend teams.

PROJECTS

MediLife — Hospital Management System [GitHub](#)

Java 21 · Jakarta EE · Apache Tomcat 10 · MySQL · Maven · JSP/JSTL · jBCrypt · Gson

- Built a full-featured hospital management platform under strict MVC architecture covering patient registration, doctor approval workflows, appointment scheduling, billing, and medical records across three roles: Admin, Doctor, and Patient.
- Engineered a dual booking flow: patient-initiated Quick Consult (direct booking) and Admin-assigned Request Appointment with rejection handling and reassignment logic modelling real-world hospital triage workflows.
- Implemented BCrypt password hashing, session-based authentication with configurable timeout, admin approval workflow for doctor registrations with licence document review, and account lock/unlock with reason tracking.
- Designed a notification system triggered by booking, confirmation, completion, billing, and account events, plus financial reporting with CSV export, system logs, and broadcast announcements for admin oversight.

Nebula Chat — Real-Time Chat Application [GitHub](#)

TypeScript · Node.js · Express · Socket.IO · TypeORM · PostgreSQL · Redis · React · Tailwind CSS · Docker

- Built a production-grade real-time chat platform with one-to-one and group messaging, supporting dual authentication flows: OTP-based passwordless login and Google OAuth 2.0 with audience validation against cross-app token spoofing.
- Engineered real-time message delivery using Socket.IO with JWT-authenticated WebSocket connections, typing indicators, read receipts, and unread message counts all managed through a singleton connection manager supporting multi-device sessions.
- Designed a 3NF-normalized PostgreSQL schema (8 tables) with TypeORM, implementing soft-delete participant tracking, self-referencing message replies, and composite primary keys on junction tables for data integrity.
- Deployed with Docker Compose (PostgreSQL, Redis, MailHog) using environment-variable-driven configuration with zero hardcoded values; implemented JWT token rotation with httpOnly refresh cookies and in-memory access tokens.

TECHNICAL SKILLS

Backend	Node.js, NestJS, Express.js, Java, Python
Frontend	React, Next.js, Tailwind CSS, HTML5, CSS3, Bootstrap, JSP/JSTL
Databases	PostgreSQL, MySQL, MongoDB, Oracle, Prisma ORM, Redis
Architecture	System design, REST API design, JWT auth, role-based access control, event-driven patterns, BullMQ
Cloud & Infra	AWS (EC2, S3, Lambda), Docker, Vercel, Render, Cloudinary
Tools	Git, GitHub, Postman, Swagger, Figma, PowerBI, Maven
Soft Skills	System design before code, edge case analysis, documentation, fast learner, extreme attention to detail

EDUCATION

BSc (Hons) Computing / IT · Islington College, London Metropolitan University 2024 – Present

Relevant coursework: Programming, Databases, Software Engineering, Networking & Operating Systems, Cloud & IoT (AWS)

CERTIFICATIONS

- AWS Academy Graduate** — Cloud Foundations, Data Engineering, Machine Learning Foundations, Machine Learning for NLP, Generative AI Foundations
- UI/UX with Figma**
